## Unlock the full potential of Microsoft ConfigMgr and Intune

Microsoft Endpoint Configuration Manager (formerly SCCM) has been an exemplary tool for managing systems across a corporate environment. However, ConfigMgr falls short on many aspects from non-Microsoft patch & application management to on-demand client troubleshooting tools. Patch Connect Plus introduces multiple new features to ConfigMgr console to broaden the scope of systems administration.

Patch Connect Plus seamlessly integrates with Intune and ConfigMgr to automatically test and deploy patches for over 600 third-party applications. The solution offers Application Management, which helps tailor the deployment of third-party applications and Admin Tools, comprised of a broad selection of administrative utilities; all from within the same console.

Product highlights

- Automated third-party patching
- Non-Microsoft application management
- Customized deployment
- On-demand client actions
- Intune integration
- Import CVEs **NEW**

600+
Application families supported

More than 500K
systems managed.

28
Essential client actions right from SCCM console.

950
Third-party patches and counting.

Fully Functional 30-day
free trial.

Product Features

🌐 Automated third-party patching

- Automate all facets of the patch management cycle.
- Identify missing patches in the network automatically.
- Gather binaries from vendor websites as they get released.
- Publish patch updates to Intune and ConfigMgrtt without any manual intervention.

🛡️ Auto detection of third-party applications

- Identify third-party patches that are applicable to your
- network. Auto-detect and maintain an exclusive list of third-party applications present in your network.
- Publish pertinent updates for third-party applications detected across the network.

📚 Application Management

- Automatically deploy a multitude of third-party applications from reputed vendors right from the ConfigMgr console.
- Customize the deployment of applications using pre/post scripts
- Configure client machines based on global conditions for maximum deployment flexibility.
- Rollback applications to previous versions.

💻 Update catalogs

- Keep popular third-party applications in a consistently updated state.
- Receive the latest security and non-security patches.

⊞ Intune Application Management

- Create and deploy third party applications using Microsoft Intune.
- Make use of Pre-defined application templates to customize application deployment.
- Upload pre- and post- deployment scripts to tailor the deployment process according to your organization's needs.

⚙️ Customized deployment

- Fine tune the deployment process for applications and updates by uploading custom scripts for pre- and post-deployment workflows.
- Choose between multiple predefined templates for the most common deployment actions.
- Design the deployment process based on your enterprise's requirements.

📑 Admin Tools

- Effectively monitor your endpoints with this toolbox of integral administrator actions.
- Instigate troubleshooting sessions.
- Conduct on-demand client operations.
- Perform a variety of system management tasks.

📄 Reports

- Get the complete list of patches and system-wise data on client machines.
- Keep a close watch on system health status and compliance information.
- Generate failure summary reports to keep track of the deployment process.

🔌 Native SCCM plug-in

- Add a special tab to the ConfigMgr console to make management easier.
- View the list of published software and corresponding configurations.
- View A complete list of third-party updates.
- Generate quick reports on client machines.

</> Import CVEs NEW

- View and fix the latest vulnerabilities affecting the endpoints in the network.
- Perform need-based vulnerability mitigation by importing CVEs into the console.
- Publish patches to ConfigMgr and Intune that are automatically mapped based on the CVE details.

What industry experts say

Joseph Moody, The beauty of Patch Connect Plus comes from pairing its central repository with separate vendors and your ConfigMgr infrastructure to automatically patch all your third-party applications.

MVP in cloud & data center management

Anoop C Nair, With Patch Connect Plus in hand, keep your third-party patching for Windows machines under control and save your systems from dangerous vulnerabilities.

Microsoft MVP and an ConfigMgr expert

Prajwal Desai,Supercharge third-party patching with Patch Connect Plus

Microsoft MVP

Hardware Requirements

The minimum requirements for Patch Connect Plus installation are as follows:

Processor Information	RAM Size	Hard Disk Space	System version
Intel Core i3 (2 core/4 thread) 2.0 Ghz 3 MB cache	2 GB	10 GB	only 64 bit machine

PCP's supported OS

OS where Patch Connect Plus can be installed	WSUS Version
Windows server 2022	10.0.20348.1.x
Windows server 2019	10.0.17763.x
Windows server 2016	10.0.14393.x
Windows server 2012 R2	6.3.9600.x
Windows server 2012	6.2.9200.x
Windows server 2008 R2* & below	3.x

Microsoft Intune supported OS:

◆ Windows 11

◆ Windows 10

◆ Windows 8.1

◆ Windows 8

◆ Windows Server 2022

◆ Windows Server 2019,2016 and 2012

* OS marked as EOL by the vendor. Hence, we don't support patching for these versions.

Pricing

Standard Edition
◆ Publishes 3rd party update catalogs to SCCM
◆ Pricing starts at **325 USD** for **250 computers/year**

Professional Edition
◆ Complete 3rd party application patch management with
◆ SCCM Pricingg starts at **625 USD** for **250 computers/year**

Enterprise Edition
◆ Professional edition features + Application management + Admin tools
◆ Pricing starts at **995 USD** for **250 computers/year**
