Are excessive admin rights causing organizations more harm than they realize?

Breach techniques 2020

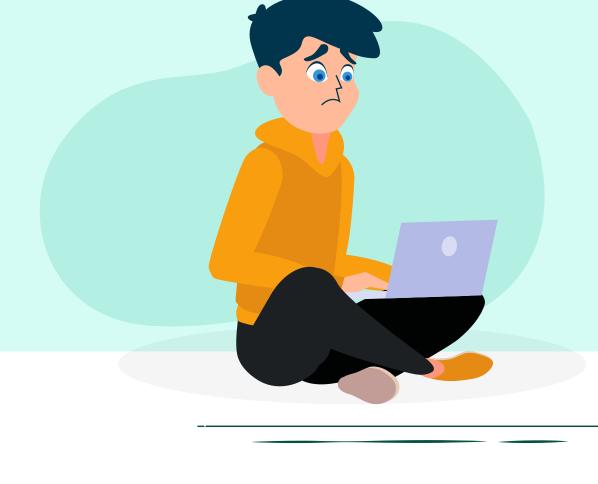

In 2020, abuse of admin rights and similar privileges was the top reason behind breaches.

Microsoft vulnerabilities that were found in 2020 could be mitigated by removing admin rights.

58 percent of all Critical

Removing admin rights would mitigate 70 percent of Critical vulnerabilities affecting Windows 7, RT, 8, 8.1, and <u>10.</u>

rights without taking away privileges from employees whose job requires them?

But how can organizations get rid of admin

three-part strategy.

It's easy! Adopt this simple

Lower enterprise-wide

Principle of least privilege +

privileges to the bare minimum required. Identify and remove unnecessary local admin accounts.

Elevate application-specific privileges instead of user

Endpoint **P**rivilege **M**anagement

privileges, and associate these rights to necessary end-user device groups.
